

#### **OVERVIEW**

NevadaNano's MPS Methane Gas Sensor provides quick and accurate detection of methane across a variety of industries—from the oil and gas supply chain to safety applications. The smart sensor is intrinsically safe, robust, and extremely poison-resistant. It has built-in environmental compensation and self-testing for fail-safe operation. Sensor readings are output on a standard digital bus or industry-standard analog output – no added electronics are required. With no field calibration required, the MPS Methane Gas Sensor delivers industry-leading performance and a low cost of ownership.

#### **OPERATING PRINCIPLE**

The Molecular Property Spectrometer (MPS) Methane Gas Sensor's transducer is a micro-machined membrane with an embedded Joule heater and resistance thermometer. The MEMS transducer is mounted on a PCB and packaged inside a rugged enclosure open to ambient air. Presence of methane causes changes in the thermodynamic properties of the air/gas mixture that are measured by the transducer. Sensor data are processed by patented algorithms to report accurate concentrations.

#### **SELF-DIAGNOSTICS**

The MPS Methane Gas Sensor automatically performs dozens of built-in tests every 2 seconds to ensure fail-safe operation. The MPS alerts the user of any sensor failure or status alert.
